Education

University of Maryland

Expected: May 2025

B.S. Computer Science (Honors) & Applied Mathematics; Minor in Data Science | GPA: 3.7

College Park, MD

- **Honors:** Dean's List (all semesters), CS Departmental Honors Program, OMSE Academic Excellence Award (Spring 2022)
- **Relevant Courses:** Algorithms I & II, Data Structures I & II, Discrete Structures, Parallel Computing*, Database Design*, Intro to Compilers, Intro to ML, Computer Systems, Computational Methods, Linear Algebra, Intro to Probability Theory (* are current)

Experience

Amazon Web Services

May 2024 – August 2024

Software Development Engineer Intern

Seattle, WA

- Designed an auditing tool for AWS financial events in a ledger reporting system (handles **10M** monthly events), resolving the issue of untracked dropped events, ensuring **100% reporting completeness**, and **automating multi-hour** on-call response.
- Implemented **real-time** event tracking across services using **SNS-SQS messaging**, providing detailed monitoring.
- Wrote **Lambda** CRUD functions for new **DynamoDB** storing event status data, improving event visibility and reliability.
- Automated logging of incomplete events to **S3** using daily **EventBridge cron jobs** and configured **CloudWatch** alarms for proactive team alerts, preempting customer-reported issues and enhancing customer satisfaction.
- Streamlined deployment by configuring SNS, SQS, DynamoDB, and S3 attributes using **AWS CloudFormation** stacks (IaC).
- Built a **React** frontend application integrating a Lambda and the DynamoDB to display event statuses and incomplete events.

Bank of America

June 2023 – August 2023

Software Engineering Intern

Jersey City, NJ

- Completed 3 projects as part of a POC aiming to transition BofA batch risk testing to stream processing using **Apache Kafka**.
- Automated risk data testing with **Python** and **SQL**, replacing an older Alteryx workflow and reducing run time by roughly **85%**.
- Integrated Bitbucket API with workflow tools, reducing manual **30+ minute** data check-in time to **seconds** for **750+ analysts**.
- Designed a test info microservice using **Java** and **Spring Boot**, containerized with **Docker**, replacing inefficient legacy scripts.

Capital One

January 2023 – April 2023

Machine Learning Engineering Intern

College Park, MD

- Applied **Spark**'s optimized distributed querying to the Card transaction graph (**900M edges**), enabling faster node info retrieval.
- Utilized Spark GraphFrames and **motif queries (DSL)** for filtered node searches, leading to median **6x faster** graph querying.
- Conducted **80 cloud-based trials** with varying RAM/storage metrics to validate results; presented metrics to stakeholders.

Projects

Hermes | Backend: Python, FastAPI, MongoDB, BERT, Pinecone, AWS EC2 | Frontend: TypeScript, ReactJS

- Designed a CLI tool allowing developers to message code snippets and communicate via the terminal, expediting development.
- Implemented user messaging via **FastAPI WebSockets** with **MongoDB** to store chat data; deployed API to **AWS EC2** instance.
- Stored **BERT embeddings** of messages in a **Pinecone vector database**, providing users with semantic search for chat logs.
- Built an Admin page for various CRUD operations and an onboarding flow with payment options implemented via **Stripe API**.
- Utilized **\$1K** award in credits from AWS Activate to host API and website built using **React** and **TypeScript**.

Unix-like Command Line Shell in C | C, Makefile

- Developed a Unix-like command line shell in **C** supporting boolean operations, pipes, and file redirection.
- Implemented CLI tokenization, constructing a tree data structure for efficient parsing and execution of commands.

YOLOv3-based Vehicle Parking Pass Detector | Backend: Python, Flask, YOLOv3, Google OCR | Frontend: HTML/CSS, JavaScript

- Achieved **96% accuracy** in detecting vehicle parking passes with custom-labeled training data via **YOLO** real-time detection.
- Integrated **Google Cloud AI** optical character recognition to detect pass identification numbers, automating record-keeping.
- Designed a real-time visualization for school administration, hosting the model in a **Flask** server and an **HTML/CSS** front-end.

Skills

Languages: Python, Java, JavaScript/TypeScript, C/C++, Ruby, OCaml, SQL, HTML/CSS

Other: Git, Django, Flask, FastAPI, Linux/Unix, AWS Tools (S3, EC2, DynamoDB, Lambda, SNS/SQS, EventBridge, CloudFormation), Apache Spark, MongoDB, Pinecone
